making a difference

FOR YOUR MOST PRECIOUS SAMPLES

MINICOLLECT®

Capillary Blood Collection System

A gentle way to collect small blood samples for a wide range of analyses.

greiner BIO-ONE

MiniCollect® is the ideal system for collecting, transporting & processing capillary blood.

The MiniCollect® tube includes an integrated scoop, allowing droplets of blood to be collected easily and hygienically.

A GENTLE WAY TO COLLECT SMALL BLOOD SAMPLES

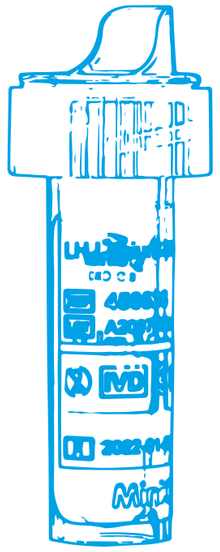

MiniCollect® offers a gentle way to collect small blood samples for a wide range of analyses. The system is perfectly suited for young children, geriatric patients as well as patients with fragile veins.

MiniCollect® is also recommended in situations where venous blood collection proves particularly difficult or contraindicted. For delicate vein conditions, patients who often have blood samples taken, or people with severe burns, capillary blood collection with the MiniCollect® system offers a great alternative to venous blood collection.

The MiniCollect® tube includes an integrated scoop, allowing droplets of blood to be collected easily and hygienically. The additional use of a capillary or funnel is not needed.

MAXIMUM TUBE OPENING FOR MINIMUM ADHESION.

- **wide opening of the tube ensures an efficient blood flow**
- **increased diameter facilitates the mixing of the sample**
- **minimizes adhesion to the wall of the tube**

MINIMAL BLOOD VOLUME
YET MAXIMUM SPECTRUM OF ANALYSIS

The capillary blood sample is becoming increasingly popular as specimen material due to its simpler and less invasive sampling procedure. One of the advantages is the low blood volume. Small quantities are sufficient to enable a variety of parameters to be tested. Capillary blood collection supports the Patient Blood Management approach: As little blood as possible, as much as necessary. If for some reason venous blood collection is not possible, capillary blood collection could be a promising alternative. For children and patients who require frequent sampling it is essential that the volume of blood collected is minimized.

TWO VOLUMES ONE TUBE

Combined filling volumes simplify the sample processing.

Combined filling volumes in the EDTA and serum tubes, simplify sample processing and help reduce inventory demands. To ensure a correct mixing ratio of the capillary blood sample with the additive, the tubes just need to be filled to between the fill marks.

Transparent labels and colour-coded caps.

The various coloured caps reflect the international colour codes according to ISO 6710.

The coloured label text ensures that the type of sample can be identified even when the cap is removed. The transparent label allows for a visual inspection of the sample material.

Transport-safe caps.

The caps are virtually leak-proof and can be transported via pneumatic post without loss of sample material.

MiniCollect® tubes are leakproof according to ISO 6710 Annex C.

Ready to use device.

Due to the integrated scoop, no additional capillary or funnel is needed for sample collection. This increases efficiency compared to conventional capillary blood collection systems.

Inventory management and planning can be completed easily and efficiently as no additional accessories are required.

MiniCollect® Complete can be processed in a standard centrifuge.

MINICOLLECT® MEETS CARRIER TUBE

MiniCollect® tubes can be inserted into a PREMIUM carrier tube. This combination corresponds to the dimensions of a standard 13 x 75mm tube.

With the MiniCollect® Complete version, which is already irreversibly assembled with the carrier tube, the advantages - particularly for automated analysis of the sample - are numerous.

The standardized tube size enables identification with standard tube label formats. MiniCollect® tubes in combination with carrier tubes can be processed in a standard centrifuge. The tubes have a pierceable cap whilst still closed and remain leakproof. It is not necessary to remove the cap before analysis, thus keeping the process simple and hygienic.

THE PERFECT COMBINATION

for your automated laboratory process, also available in pre-barcoded versions

AUTOMATION

SUITABLE FOR AUTOMATIC PROCESSING

On many analysis instruments, both venous and capillary blood samples can be analysed in the same way.

NO EXTRA STEP BEFORE ANALYSIS

MiniCollect® Complete tubes are CLSI AUTO1-A-compliant. The tubes fit into 13 x 75 mm racks and are suitable for automated processing in the laboratory.

VALIDATED ON MANY LAB INSTRUMENTS

MiniCollect® Complete tubes are validated on multiple lab instruments.

Gentle and caring
for patients
both young
and old.

The lancets are colour-coded for easy identification of puncture depth and application.

WIDE RANGE OF SAFETY LANCETS

The MiniCollect® lancets are available with a wide range of puncture depths and blade sizes / needle gauges to ensure that the puncture wound can be kept as small as possible while achieving the targeted sample volume.

The safety mechanism ensures that the blade/needle is automatically retracted after the puncture and is safely enclosed within the plastic housing. In particular when dealing with our youngest patients, it is imperative that the procedure be as gentle as possible to avoid causing unnecessary anxiety.

The safety mechanism means that the blade/needle is hidden from view, allowing the blood collection to take place in a more relaxed atmosphere for all concerned.

Lancelino Safety Lancet

Ergonomic, rounded design ensures a comfortable grip. To activate, position on the puncture site and press.

Safety Lancet

Standardized blade position for consistent penetration direction. Activation by pressing the button.

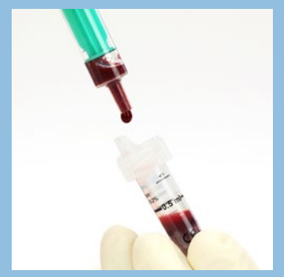

FOR COAGULATION TESTING

venous blood is required

MINICOLLECT® COAGULATION TUBE

INTENDED ONLY FOR USE WITH VENOUS BLOOD:

1

Transfer venous blood into the tube.

2

Close the tube with the original cap.

3

Immediately invert the tube gently.

MINIMUM BLOOD VOLUME

The smallest amounts of blood are also sufficient for venous blood collection.

PLEASE OBSERVE THE INSTRUCTIONS FOR USE

at www.gbo.com

RECOMMENDED HANDLING

1

Prewarm and disinfect the puncture site.

2

Remove the cap.

3

Carry out the puncture and discard first drop of blood.

4

Collect the blood sample.

5

Close the tube with the original cap.

6

Immediately after collection, invert the tube gently.

PRODUCT OVERVIEW

MiniCollect® Complete

Pre-assembled with Carrier Tube

Item No.	Volume range	Cap colour	Additive	Tube size	Label type	Inner / Outer [Qty.]
450549	0.5 - 1ml	red	CAT Serum Clot Activator	13 x 75	transparent	500 / 2,000
450548	0.5 - 0.8ml	gold	CAT Serum Sep Clot Activator	13 x 75	transparent	500 / 2,000

ADVANTAGES

FOR DIVERSE PATIENT GROUPS

For patients scared of blood collection needles or with difficult to access veins.

FOR A WIDE RANGE OF ANALYSES

Blood is a valuable resource, which should be treated with care. MiniCollect provides low volume tubes to support "Patient Blood Management".

IDEAL FOR COLLECTING, TRANSPORTING & PROCESSING SMALL BLOOD SAMPLES

The integrated blood collection scoop allows for a quick and easy collection, leakproof caps ensure safe transport and tubes can be directly inserted into the analyzer, thereby increasing workflow efficiencies.
